Summary

Full stack and product engineer who ships end to end, with three plus years of production experience across web, mobile, and email surfaces. Currently leading product and engineering at gotdot.it, a Microsoft Outlook add-in for sales teams, with end to end ownership from schema design through React UI to AWS deployment. Previously built a real time multiplayer trivia platform across three platforms at GameNite (React Native mobile, Next.js web, Node backend), and the first MVP for Flowva (React TS, Tailwind, Supabase) which now serves 4,000+ users. I bring backend rigour, frontend craft, and a sharp product sense to whatever surface the work shows up on.

Technical skills

Frontend and mobile React, Next.js (15), React Native (iOS / Android), Redux Toolkit, Tailwind CSS, TypeScript. Outlook add-ins on Office JS / Microsoft Graph.

Backend and systems Node.js / Express, Laravel; REST API design (50+ endpoints shipped across roles); WebSockets (Socket.IO); Server Sent Events; SOQL; provider abstractions for multi source integration (designed a 28 method CRM abstraction at gotdot.it).

Languages TypeScript, JavaScript (ES6+), PHP, Python, SQL.

Databases PostgreSQL, MySQL, MongoDB, DynamoDB, Supabase. ORMs: Prisma, Eloquent. Schema design across relational and NoSQL stores.

Cloud and infrastructure AWS (Lambda, DynamoDB, S3, Cognito, RDS PostgreSQL); Azure OpenAI; Terraform for multi environment IaC; Docker; Kubernetes (basic).

AI and product Production LLM integration on Azure OpenAI; AI feature design across classification, extraction, scoring, NL search, and SSE streamed generation; product ownership of feature roadmaps; applied deep learning in PyTorch (rice blast research).

Engineering discipline Git and GitHub, Agile / Scrum, testing (unit, feature, integration), AI assisted development (GitHub Copilot, Microsoft Applied Skills certified).

Experience

Product and Full Stack Software Engineer — gotdot.it (*Full-time, Remote*) — Jan 2026 – Present Leading end to end product and engineering for an email native revenue intelligence add-in for sales teams. Surfaces include an Outlook add-in (Office JS), a web client, and a Node backend. - Shipped a production **Microsoft Outlook add-in** integrated with Microsoft Graph and MSAL, live with Zoho CRM in production and serving real sales teams. - Designed and shipped a **28 method provider agnostic CRM abstraction** so onboarding a new CRM (Salesforce, HubSpot, Dynamics) is a single file implementation rather than a product rewrite. - Built the data layer on **Prisma and PostgreSQL**, with schemas designed to stay stable across heterogeneous CRM source systems. - Shipped four production **AI feature phases on Azure OpenAI**: thread analysis (classification), task and contact extraction, SSE streamed reply composition, and revenue intelligence (deal health scoring and NL search with insights and strategic suggestions). - Replaced a 645 line deterministic keyword classifier with an LLM driven thread analysis service. - Identified and closed a cross user AI request cache leak by scoping caches per authenticated user (multi tenant security fix). - Stack: TypeScript, Node.js / Express, Prisma / PostgreSQL, Azure OpenAI, MSAL, Microsoft Graph, Office JS, Zoho and Salesforce REST + SOQL, SSE, Socket.IO.

Web and Mobile Developer — GameNite App (*Full-time, Remote, USA*) — Jun 2025 – Dec 2025 Real time multiplayer trivia platform delivered across three platforms. - Built **React Native** apps for iOS and Android with **25+ screens**, **Next.js** web client, and **Node.js + Socket.IO** backend for real time gameplay sync, matchmaking, live scoring, and leaderboards. - Designed and shipped **20+ RESTful API endpoints** for sessions, profiles, and gamification features. - Stood up multi environment **AWS infrastructure** (Lambda, DynamoDB, S3, Cognito, RDS PostgreSQL) provisioned via Terraform. - Stack: React Native, Expo, Next.js 15, TypeScript, Node.js, Socket.IO, Redux Toolkit, AWS, Firebase Auth.

Software Engineering Fellow — Brave Redemptive Fellowship (*Residential, Ogbomoso, Nigeria*) — Jul 2024 – Jun 2025 - One of 24 fellows selected from hundreds of applicants for a fully funded (\$5,000) year long residential programme. - **Preview AI** (Frontend Engineer): contributed to an LLM powered hiring tool that helps managers efficiently interview and shortlist talent. Built reusable React TypeScript components and integrated LLM APIs. - Led an analytics sub team that ran growth analytics and produced strategy recommendations for the organisation's marketing campaigns.

Product and Full Stack Software Engineer — Flowva (*Contract, Remote, Canada*) — Mar 2025 – May 2025 Owned the **first MVP for a new product direction** end to end. - Built the MVP in three months on React TS, Tailwind, Supabase, and PostgreSQL; product now serves **4,000+ users**. - Contributed product feature and UX direction alongside engineering. - Optimised digital tools for businesses and freelancers, focused on time and cost savings.

Back End Developer — ActsSocial (*Contract, Remote, USA*) — Feb 2025 – Apr 2025 - Designed and shipped **30+ Laravel REST API endpoints** with full models, migrations,

controllers, and resources, for engagement features and supporting analytics. - Stack: PHP, Laravel, MySQL, Eloquent ORM, with unit, feature, and integration testing.

Web Developer — Better Place LTD, Lagos (*Full-time, On-site*) — Jan 2023 – Jun 2024 - Designed and shipped websites and landing pages delivering up to **800% ROI**. - Set up information systems and networking infrastructure that lifted operational efficiency by ~**15%**.

Selected projects and research

Research Assistant — Dr Stephen Obamiyi's lab, Afe Babalola University (2024 – Present) Applied deep learning to rice blast disease detection in **PyTorch**. Dataset curation, convolutional architecture training, evaluation. Manuscript in preparation.

Multilingual Text-to-Speech Synthesizer — Undergraduate dissertation, OAUSTECH (2022 – 2023) Designed and implemented a multilingual TTS system in JavaScript.

E-commerce Web Application — Personal project Multi category enterprise tech gadget store with voice and text search, order tracking, and RBAC for admin product and order management.

Education

B.Tech, Mathematical Sciences (Computer Science concentration) — Olusegun Agagu University of Science and Technology (OAUSTECH), Nigeria (2017 – 2023) Second Class Honours, Upper Division. Key modules: Artificial Intelligence, Computer Architecture, Computer Logic, Computer Networking.

Certifications

- **Microsoft Applied Skills: Accelerate App Development by Using GitHub Copilot** — Microsoft, 2025
 - **Microsoft Professional Certificate: Introduction to Generative AI** — Microsoft, 2025
 - **Postman API Fundamentals** — 2025
 - **Product Field Training** — 2024
 - **SHE Hacks Africa Coding and Entrepreneurship Bootcamp** — WAAW Foundation, 2018
 - **Android Development Course for Beginners** — Andela Learning Community and Google, 2017
-

Honors

- **Brave Redemptive Software Engineering Fellow** — one of 24 selected from hundreds of applicants for a fully funded (\$5,000) residential programme (2024–25)
- **Director of Hardware and Software**, NACOS, OAUSTECH chapter — *Certificate of Leadership awarded* (2018/19)
